

Reliable Services Today and Tomorrow

Riverside Public Utilities works every day to provide you with the highest quality, reliable energy and water services.

We are also hard at work making sure that reliable service continues well into the future. Below are just some of the projects that are helping us achieve this goal.

JW North Water Treatment Plant – The Utility's first design/build project, this plant will help to expand Riverside's locally generated water portfolio by 8,000 acre feet per year.

Riverside Transmission Reliability Project – Our ability to bring in additional power to serve growing needs is at its limit. The RTRP project will bring a much needed second transmission line and new substation to Riverside to meet demands and maintain reliability.

Riverside Energy Resource Center – Already providing up to 96 megawatts of electricity to serve Riverside's peak demands. Plans include two more generation units that would add an additional 96 MW of locally generated power to meet summer demand.

Well Rehabilitation & Replacement – Without our water wells working in top condition, we could not meet the increasing demands of our customers. That is why we constantly maintain our well sites and pumping equipment and replace equipment when needed.

Pipeline Replacement Project – Hundreds of miles of water mains and service laterals throughout the City are being replaced and upgraded to ensure high quality, reliable water service.

Conservation Programs – Our conservation programs reward customers for being energy efficient. Since 2001 customers have saved more than 67 million kilowatt hours of electricity, eliminating 134 million pounds of CO2 emissions, or the equivalent to removing approximately 10,307 cars from the road.

Buy a new **Energy Star®** refrigerator and get a **DOUBLE** rebate.

And, get up to **10% cash back** on a new central air conditioning unit! Visit our website for more information about our rebate programs and how you can save water, energy & money.

Don't forget you can now pay your Utility bill online!

Do you know...

It's important to vacuum or clean your refrigerator coils. It will use less electricity, operate more efficiently, and last longer. Coils are mounted at the rear or below the refrigerator.
